

MEGA LUBE SHC 200

SYNTHETIC HIGH TEMPERATURE GREASE

Characteristics: **SHC 200 GREASE** is premium quality SYNTHETIC industrial grease, made using the latest technology , SYNTHETIC fluids and additives.

This grease is recommended for use over a wide temperature range (-40°C to 200°C) as a multi purpose lubricant to be used in plain and antifriction bearings, cars, hot motors etc.

SHC 200 GREASE temperature range extends from frozen food factories to steel mills and they offer high anti-wear performance through this range.

The Synthetic base oils offer high temperature stability and a much higher viscosity index than mineral oils enabling extended re-lubrication periods and high thermal oxidation stability

Data:

NLGI Classification	2
Oil pool @ 40°	200 cst
Drop point °C	> 260°C
Operating temperature	-40 °C to 180 °C
